Special Features

Everything is about living the experience of synesthesia, ***visual and audio are critical***, the world is in grey scale by default and the surrounding of the player is only colorful within a small radius.

Acting as a trigger is ***Sound notes*** forming a Music that increases said radius gradually until a ***complete Music*** is played and the radius covers the whole levels, making it possible to experience the level once more in its ***vibrant nature instead of grey scale***.

As a ***rhythm game**, music is crucial and so it has to be unique to the game and ****adapted to the experience***.
