

Build Your Game Pipeline (Pre-Production Focus):

Objective : Understand the pipeline and plan a small game concept.

1. 2D game platformer Ninja.
2. Game Production pipeline:

2.1- Pre-production:

In this phase, the game idea and vision are defined. a small GDD is written to describe the core mechanics like running, jumping, and attacking. a simple prototype is created to test movement and gameplay ,this is the first step of game production pipeline .

2.2- production :

during production, the main game content is created and almost finished . This includes for example the ninja character, enemies, levels, and UI. Game systems such as movement, combat, and scoring are programmed, and sounds are added , so you can say that this phase is the most important and it really take time to finish it perfectly because if the main game content is not clear it will be miss and have no vision and take to procrastination and miss .

2.3- Post-Production:

In post-production, the game is polished and improved. Bugs are fixed, gameplay is tested, and difficulty is balanced. The final version of the game is prepared and released. this phase is really important because it has deadline and you have to be

responsible and respect the time of your promise to your audience and realise the game in time .

Team Roles Mapping:

-- Team Roles – 2D Platformer Ninja Game --

.Game Designer :

he is the responsible for idea of the game , and rules of every one in the team , and also core mechanics. it design game level and gameplay flow .

.programmer :

he is the one who one who Programs player movement, combat, enemies, and game systems.and he is also Fixing bugs and improves performance of the game

. artist :

he is the one who Creates the ninja character, enemies, environments, and UI graphics and also defines the visual style.

. sound design :

Creates sound effects and background music. and also his role is to improves game atmosphere and feedback , game without good sound are nothing .

. Producer :

he is Manages the schedule and keeps the team organized. and makes sure all the tasks are finished on time and every one is doing he is role in team .

Rapid Prototyping Exercise:(ninja 2d game)

1. one gameplay mechanic : jumoling .
2. prototype description :

I drew a simple level on paper with platforms and gaps and also The ninja character how can run and jump from one platform to another. I simulated jumping by moving the character step by step to see if jumps feel possible and fun.

3. peer feedback : The jump feels a little too short to reach higher platforms.
4. Short Reflection:

This prototype helped me understand how important jump distance is and that i should fix it. Movement felt clear and easy to test on paper. also the feedback showed that the jump height needs adjustment. In the next version I would increase jump height and test again.this Rapid prototyping helped find problems early.

Game Design Document Mini Draft :

-- GAME TITLE :

BLACK NINJA

-- GENRE :

2d PLATFORM / ACTION

-- CORE GAMEPLAY LOOP :

The player moves through levels by running and jumping. The ninja fights enemies and avoids traps. The player reaches the end of the level and unlocks the next stage.

-- Target Audience :

Casual and core players who enjoy fast 2D action games.
Suitable for ages 10+

– KEY MECHANICS :

Running and jumping

Wall jumping

Sword attacks

Enemy avoidance

Simple checkpoints

-- ART STYLE :

2D stylized art with a ninja theme and dark colors with simple shapes and smooth animations it's inspired by classic platformer games
